Seydelmann Cutter K 1004 AC-8

Thanks to the knife head with 8 knives and the flow dynamically shaped lid the Seydelmann High Efficiency Cutter guarantees a fast and homogeneous reduction and emulsification. The components of all Seydelmann Machines comply with the up-to-date technical development and contribute to an increase in product quality.

Applications
Suitable in particular for the chopping, mixing and emulsification of fresh meat, precut frozen meat, frozen meat blocks, cooked meat as well as fish, vegetables, fruits and other edibles at temperatures from -18 (-1 °F) up to 85 °C (185 °F).

Machine Design
The machine frame of the K 1004 is made of stainless steel. All edges are rounded and all surfaces are polished very precisely and designed with a slope enabling cleaning water to drain completely from all surfaces. The embedded covers and the closed bottom with ventilation prevent pollution and water from entering the machine. The knife hood is flow dynamically shaped. Hardly any unchopped product residue is left in the cover. The gap between the knives and the cover or the bowl is very small.

Facts
Bowl content: 1000 liters
Weight: 13,000 kg / 28,659.6 lbs
Loading options: 120-, 200- or 300-l trolley
Power of motor AC-8: 315–355 kW / 422.42–476.06 HP

Vacuum-Function
Cutting under vacuum, a firm emulsion free of air with a volume reduction of 5-7% is produced. Therefore, an even better fineness of the product is achieved. Thanks to the exclusion of air, the final product gains a significantly longer shelf life. A better protein extraction increases the moisture and fat absorption of the product improving the development of the flavour of spices next to the better binding and stability of the final product.

Cooking-Function
The bowl is heated up by hot steam from a nozzle system installed below the bowl. Enormous time savings can be achieved thanks to cooking and cutting in one step. The production time can be further reduced using an additional heating for the knife hood. An increase of approx. 10% in the volume of the material as well as the complete preservation of taste, aroma and protein is possible. Cooling is optionally available via a nozzle system.
Standard equipment

- Vacuum- and/or Cooking-Function
- Operation via cross switches
- Changeable and balanceable knife head
- Hydraulic main cover, noise absorbing cover and ejector
- Noise absorbing cover with spice hatch made of stainless steel
- Central lubrication system
- Pneumatic locking of knife shaft arm (K 204 - K 1004)
- Vacuum pump (Water ring pump)
- Switch-off for temperature and operating time
- PT 100 temperature sensor
- Separate electrical cabinet made of stainless steel with integrated main switch
- Control of unbalanced state

Additional equipment

- Hydraulic loading device
- High speed
- Automatic knife shaft balancing system (starting from K 324)
- Frequency controlled stepless bowl
- Water injection nozzle (optionally with water meter)
- Liquid injection nozzle
- Various knife systems
- Fast clamping nut for knives
- Direct steam
- Liquid nitrogen connection
- Cooling via liquid nitrogen (LN₂) or carbon dioxide (CO₂)
- Cover heating / cooling
- Noise insulation version
- Up to 9 switch-offs for temperature and operating time
- Stepless ejector with pre-programmable speeds

Control: Command 1500

- Digital display for gear, knife speed, running time, temperature, bowl speed, time
- Display of water quantities & vacuum values
- Switch-off automatic system for temperature and running time
- Service and maintenance indication
- Stainless steel box

On request: Auto-Command 2000, 3000, 4000

- Data recording
- Service module
- Recipe calculator
- Production plan
- User friendly and logical design
- User administration
- Remote control
- Indication of all technical parameters
- Teach-in function
- Stainless steel box
- Scanner for Auto-Command (optional)

Motor AC-8

- 6 steplessly programmable knife speeds, forward
- 2 reverse mixing speeds
- 2 separate bowl speeds
- Frequency-controlled 3-phase motor
